

Release Notes: Avast Business Antivirus 19.6 (July 24, 2019)

Windows Antivirus: 19.6

Release Summary

This release contains new improvements and bug fixes to our Avast Business Antivirus client.

Avast Business Antivirus 19.6 will be available for new installations straight away. All existing devices with Avast Business Antivirus 19.5 or lower will start the automatic upgrade to 19.6 at a later time.

If you wish to upgrade your devices to 19.6 prior to the automatic upgrade, then you can create a new Task (Update device – Program update task) from your console.

A system reboot will be required to complete the installation. There will be no forced reboot unless you have set this in your device policy settings. Servers will never reboot regardless of your device policy settings.

Improvements

- Updated Avast Business Antivirus, Pro and Pro Plus compatibility with Windows Server 2019, Sharepoint 2019, and Exchange 2019
- Smarter Scan – We've redesigned our Smart Scan
- Improved performance – Several performance optimizations to lower the disk and CPU usage during application installation
- Uninstallation will make sure all Avast files are removed from your device

Resolved issues

- Mail shield should not block connection anymore when it is not possible to connect to IPv6 address
